Tables define table inside a container i.e -> <div> tag.</div>
The ctable > tag is used to define tables in HTML.
The zone of the super of the last date
It is used to format & display tabular data.
to tran: used to display table now
to tag: used to display table data
to tag: Usea to aisplay take aata
th tag: used in place of table data for displaying table headers
table headers

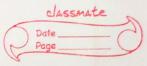

We can define as many table rows as we want.

To add a caption to the table, we use captions tag inside table. thead tag: used to wrap table head (caption & tx with th) tbody tag: used to wrap the table body. Colspan attribute
This attribute is used to create cells spanning multiple 2 th Colspan = "3" > Harry =/th>

Spans 3 Columns An HTML form is used to collect input from the user form tog is used for the same c form = "form.php" => Data of this form after submission goes to form.php
c form >
c fo There are different form elements for different kinds of user input input element: (an be of type fext, checkbox, radio, button and submit. We also have a file type placeholder shows the background of html text box;; type = "text" attributes can be used to size the textarea.

input: checkbox => Shortcut > Select element: Defines a drop down list

	Note: you don't have to remember all the task by will
	Note: you don't have to remember all the tags, you will automatically memorize them with practice
	Embedding Videos,
	Embedding Videos Videos in HTML
	< Video Stc = 'havry mp 4' > Exror = / Video >
	hale for Video
_	we can use:
1	Whath. 10 daylist which of it video (Height during party sagust)
<u></u>	Attribute for video We can use: Width: To adjust width of a video (Height automatically sadjusts) We can use autoplay/loop to autoplay or loop the video.
